REBAR COVER by RSI®

U.S. Patent no. 5950680

Rebar Covers are an alternative safety device used on construction sites to guard against injuries and impalements that could occur around exposed steel rebar.

The Rebar Cover is available in up to 12' lengths but is most cost effective when purchased in 8 ft. lengths.

Results after use of the Rebar Covers have shown straighter alignment of the bars.

- Safe & economical application
- Can be used limitless times
- Works vertically & horizontally from 3/8 to 7/8 bars
- Strong – made from 20ga Galvanized Iron. G90, ASTM A526
- Ease of pouring – the spring action of the configuration bites onto the bar deformations and does not get knocked off by the concrete pump line or concrete bucket chute
- Complies with O.S.H.A. 29CFR 1926.701(b)

The Rebar Covers are also available in 14ga. Galvanized iron for use in California, USA

Operation & Maintenance

Rebar Cover is designed for use where two or more vertical or horizontal bars are situated in a straight line.

Cover can be cut on site to suit different applications.

Never use Rebar Cover in such a way that more than 25% of the covers length extends past the end bar under a single cover.

Inspect covers after use and discard any bent or crushed covers.
